Quality Assurance

We're developing a tool to enhance the gathering of psychedelic experiences. This will provide contributors with a more engaging platform to share their journey, while granting researchers access to top-tier textual data on these experiences.

1.1. Introduction

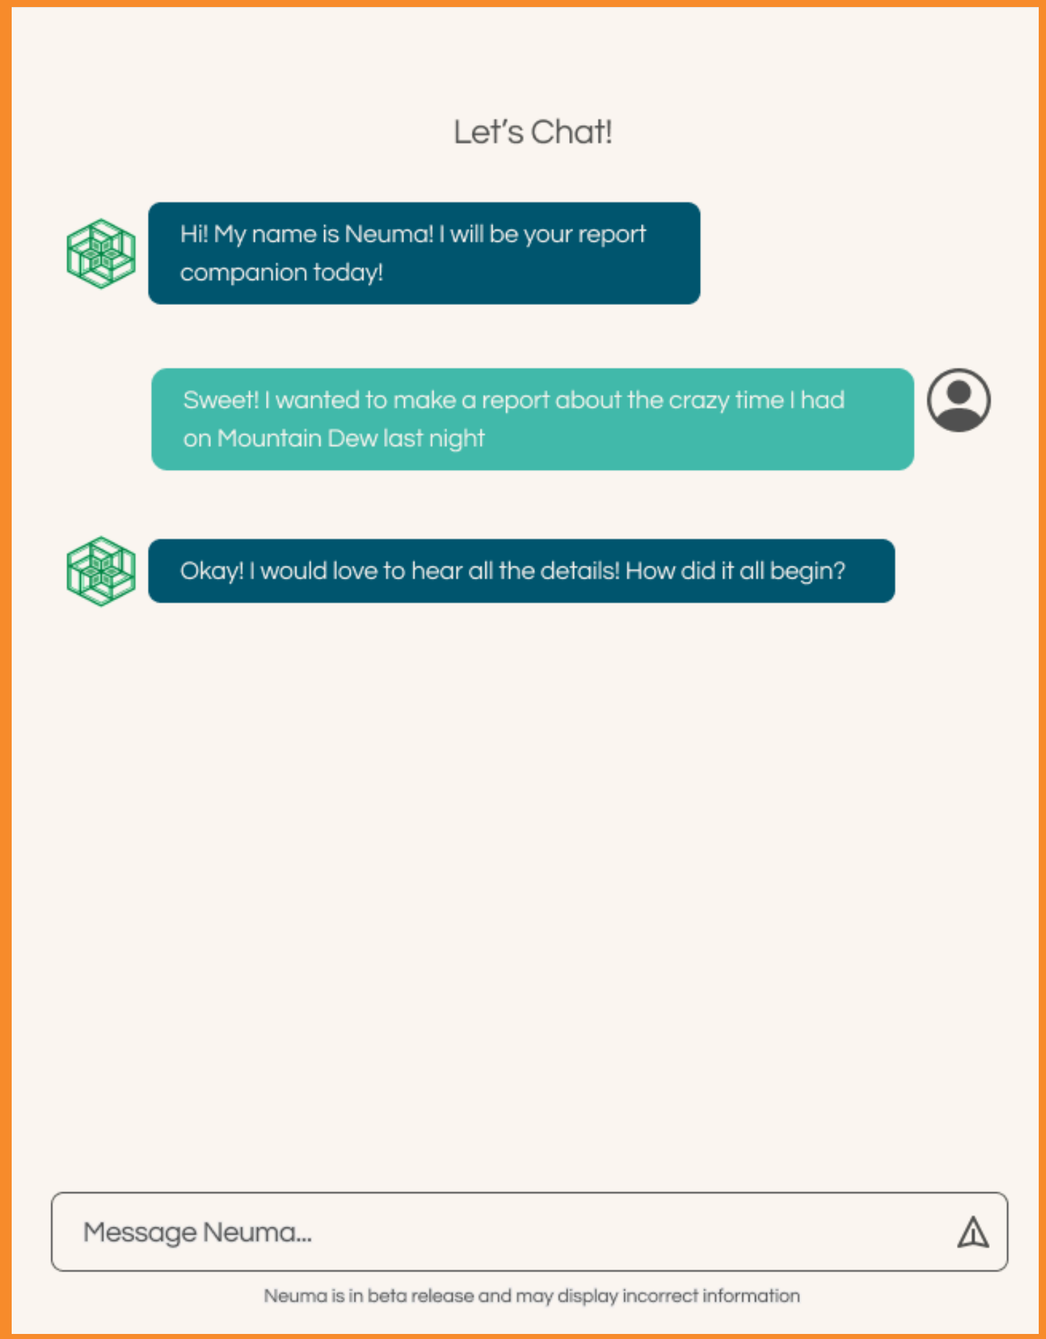

A User-Friendly Language Model Approach

Contributors

- Interactive conversational interface
- Clarifying questions
- Sentiment scores and word clouds provided for each drug category

Researchers

- High-quality data access for researchers
- API with full read access to contributor-language model conversations
- Semantic network analysis graph showcasing word connections and strengths

1.2. System Quality

Neuma
The Centre For Social Wellness

1. System Reliability & Availability
2. System Functionality
3. Usability
4. Data Security
5. Maintainability

1.2. Software Quality

1. Fault Tolerant
2. Language Model Accuracy
3. User-friendly Design
4. Security
5. Serviceability & Flexibility

1.3. Tasks

Neuma

Leveraging GitHub Issues

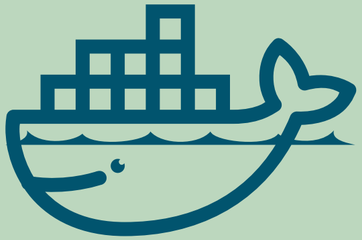

2.

Deployment Plan

In the realm of psychedelic research, access to comprehensive data has been limited for researchers, while contributors seek a more engaging platform to articulate their experiences. Our solution bridges this gap by empowering contributors with a specialized language model for interactive discussions about their psychedelic journeys while providing researchers with an API platform to access high-quality data.

2.1. Deployment Platform

Scalable Infrastructure Deployment Strategy

- Two Docker images: one for front-end, one for back-end
- On-premises hosting until funding obtained
- Transition to VPS for scalability if funding is secured
- Resource allocation flexibility based on funding and platform usage

Neuma
The Centre For Social Wellness

2.2. Media & Deliverables

The GitHub repository contains everything, including source code, wiki, issues, project management, and secrets (credentials). Client has already been added as a contributor. Other deliverables include credentials for the email associated with Google OAuth.
